

CHARLIE JAMES Z. ABEJO

Full-Stack Web & Mobile App Developer — React / React Native · TypeScript · Python · CRM & API Integrations

Misamis Oriental, Philippines (Remote) · +63 985 612 2843 · capstonee2@gmail.com · github.com/CharlieJamesGwapo · portfoliohobby.vercel.app

PROFESSIONAL SUMMARY

Full-stack developer with **5+ years** shipping production applications across **web, iOS, and Android**, specialising in **CRM API integrations, real-time sync, and AI-assisted delivery**. Currently building a production **club-management CRM platform end-to-end** for an Australian multi-club fitness group — a unified system for member records, scheduling data, payments, and team outreach that replaced scattered tooling, which is exactly the shape of a practice-management build: **Next.js/TypeScript dashboards, event-driven Python sync workers, bidirectional CRM REST API + webhook integration, and Twilio voice calling embedded in the CRM UI**.

Ships daily with **AI-assisted development tools** (Claude Code as a daily driver — custom agents, skills, MCP servers) to deliver polished, production-ready products on **accelerated timelines**. Experienced with secure auth, **RBAC, audit trails, and OTP/2FA**; payment and reconciliation pipelines; and offline-tolerant, idempotent sync architectures. Works independently with minimal oversight and communicates clearly with non-technical business owners across Australian and US time zones.

FIT FOR THIS ROLE

Cross-platform web + iOS + Android	Shipped React Native and native Android (Java/Kotlin) booking apps with Firebase real-time data, auth, and push notifications, alongside production Next.js/React web apps.
Bidirectional CRM API integration	Built and operate a bidirectional sync between a commercial CRM (PerfectGym) and Postgres — REST APIs, webhooks, idempotency keys, retries, reconciliation. The same contact/conversation/payment/automation patterns GoHighLevel's API uses.
Auth, RBAC & audit trails	Implemented role-based access control, audit trails, and OTP/2FA (SMS + email) in production systems; JWT/session auth across web and mobile.
Compliance-critical data safeguards	Deep Postgres experience — schema design, triggers, row-level security, durable job queues — plus automated reconciliation of financial records against source-of-truth reports.
Offline & real-time sync	Designed event-driven sync pipelines with leases, idempotency, and replay windows; WebSocket and Firebase real-time updates for live multi-user dashboards.
Comms, scheduling & payments	Integrated Twilio Voice calling into CRM member panels; built booking/scheduling apps and a production POS with payments, inventory, and reporting; parsed partner webhooks and email feeds in fintech.
AI-assisted development	Daily Claude Code workflows (custom agents, skills, MCP orchestration) plus LLM API integration — tool calling, streaming, structured output, and voice/dictation-style features.

CORE SKILLS

Mobile & Cross-Platform	React Native, Android (Java/Kotlin) · Firebase real-time data, auth & push notifications · offline-tolerant sync patterns (idempotent replays, durable queues)
-------------------------	--

Frontend	React 19, Next.js 16 (App Router), TypeScript, TanStack Query, Zustand, Tailwind CSS, shadcn/ui · Vue.js, Angular
Backend & APIs	Python (FastAPI, Django, Flask, Celery), Node.js/Express, C#/.NET, Go, PHP (Laravel) · REST, GraphQL, WebSockets, webhooks, JSON-RPC, OpenAPI · JWT, OTP/2FA, RBAC, audit trails
CRM & Integrations	CRM REST API + webhook sync (PerfectGym; GoHighLevel-equivalent patterns) · Twilio Voice · payment data pipelines & reconciliation · partner webhooks & email-feed parsing
Data & Infrastructure	PostgreSQL (Supabase, Neon) — schema design, triggers, RLS, indexing, migrations & backfills · MySQL, MongoDB, Firebase · Docker, Linux VPS, CI/CD (GitLab, Buddy, Jenkins), Vercel
AI Engineering	Claude Code (custom subagents, skills, hooks, MCP servers), Cursor, GitHub Copilot · LLM API integration (Claude, OpenAI) — tool calling, streaming, structured output · agent instruction design

WORK EXPERIENCE

AI Full-Stack Developer (Contract, Remote) — Multi-Club Fitness Group (Australia) 2026

- Building a production **CRM / management platform** that unified member records, subscriptions, payments, visit history, and outreach into one system — revenue, retention, profiling, and win-back dashboards in **Next.js 16, React 19, TypeScript, TanStack Query**.
- Designed a **bidirectional, event-driven CRM sync worker** (Python, Celery + Redis) against the PerfectGym CRM REST API — durable Postgres job queue with leases, **idempotency keys, bounded retries, and zombie-run recovery** — deployed with Docker on a Linux VPS.
- Integrated **Twilio Voice browser calling directly into CRM member panels** to power outreach and win-back workflows.
- Led **migration and backfill** of member, contract, visit, and payment history with **automated reconciliation against source-of-truth financial reports** — verified line-by-line with the business owner.
- Deliver daily with **Claude Code**: repo-level agent instructions, custom subagents/skills, and MCP integrations (GitHub, Linear, Supabase) that encode architecture rules so AI-generated code ships at production quality.
- Collaborate directly with a **non-technical business owner** — turning plain-language requirements into specs, and recommending architecture improvements along the way.

Stack: TypeScript, Next.js 16, React 19, Python, Celery, Redis, Supabase Postgres, Docker, Linux VPS, Twilio, Claude Code + MCP

Full-Stack Developer — Rooche Digital Company Jan 2026 – Mar 2026

- Delivered client dashboards and web apps with **Node.js and Python (FastAPI)** backends and **React, Next.js, and Angular** frontends.
- Built FastAPI microservices with Pydantic validation and OpenAPI-documented REST contracts; shipped **REST and GraphQL APIs**.
- Integrated **Firebase and Supabase** for auth, row-level security, and **real-time multi-user sync**; WebSocket + webhook integrations for live dashboard updates.
- Maintained CI/CD on GitLab, Buddy, and Bitbucket with preview deploys and pytest gates.

Stack: Python (FastAPI), Node.js, React, Next.js, Angular, PostgreSQL, Firebase, Supabase, Docker, GitLab CI

Full-Stack Developer — Robustech IT / SocietyOne (Australia) Jan 2024 – Dec 2025

- Executed a major **data and platform migration** in a regulated fintech: re-platformed Golang and Node.js microservices to .NET (C#), standardising logging, error handling, and deployments.
- Built **AWS Lambda functions** (Python and .NET) for event-driven workflows and third-party integrations with **partner banking and lending systems**.
- Owned **JSON-RPC, WebSocket, and webhook integrations**; wrote Python automation for **reconciliation, reporting, and partner-feed / email parsing** (httpx, Pandas).
- Maintained Buddy CI/CD pipelines for automated testing, staged deployments, and rollbacks.

Stack: C#/.NET, Python, Go, Node.js, AWS Lambda, REST, GraphQL, PostgreSQL, Buddy CI/CD

Earlier Full-Stack & Mobile Projects

2021 – 2023

Jolly Ride & Massage Booking apps — React Native and Android (Java/Kotlin) **scheduling/booking apps** with Firebase real-time data, auth, and push notifications.

MOIST Alumni Tracking System — secure records platform (Laravel + MySQL) with **RBAC, audit trails, and OTP/2FA** over SMS and email.

Filtra Coffee POS — production point-of-sale platform used daily by store staff: Go backend, Next.js/Vue frontends, **sales, payments, inventory, and reporting** modules; Dockerised deploys.

E-Cycle Hub — waste-pickup **scheduling platform** with real-time WebSocket/webhook updates; Go backend on Neon serverless Postgres.

EDUCATION

BS in Information Technology — Misamis Oriental Institute of Science and Technology

2022 – 2025

Dean's Lister, 2nd & 3rd Year (Ranked 2) · TOPCIT participant (2024–2025)

CERTIFICATIONS

- Databases with SQL — Harvard CS50
- Microsoft — Manage AD DS Domain Controllers & FSMO Roles
- Windows Server & Active Directory administration training

AVAILABILITY

Available immediately — remote only. Full contract capacity, comfortable overlapping US business hours. Independent, detail-focused, and used to owning a build end-to-end — from architecture through deployment, documentation, and maintenance guides.
